

Amendments to fishing opportunities for 2023 in non-EU waters

Published by AGRINFO on 20 Jun 2023

Council of the EU amends Regulation on total allowable catches following consultations with Regional Fisheries Management Organisations

Council Regulation (EU) [2023/730](#) of 31 March 2023 amending Regulation (EU) 2023/194 fixing for 2023 the fishing opportunities for certain fish stocks, applicable in Union waters and, for Union fishing vessels, in certain non-Union waters, as well as fixing for 2023 and 2024 such fishing opportunities for certain deep-sea fish stocks, and Regulation (EU) 2022/109

Update

This new Regulation carries over unused quota for certain stocks and sets 2023 fishing effort limits for EU fishing for bluefin tuna in the International Commission for the Conservation of Atlantic Tunas (ICCAT) Convention area. It also revises the quota for yellowfin tuna in the Indian Ocean Tuna Commission (IOTC) Area of Competence; and sets catch limits for jack mackerel adopted by the South Pacific Regional Fisheries Management Organisation (SPRFMO).

Impacted products

albacore, bigeye tuna, bluefin tuna, yellowfin tuna, jack mackerel, swordfish, toothfishes

What is changing?

- The International Commission for the Conservation of Atlantic Tunas (ICCAT) has adjusted the 2023 EU quota for stocks in its Convention area. Quotas for individual EU Member States include carry-over of unused EU quotas allowed by ICCAT before the start of the fishing seasons for those stocks. Annex ID of Regulation 2023/194 is amended accordingly (Table 1).
- The South Pacific Regional Fisheries Management Organisation (SPRFMO) has adopted catch limits for jack mackerel, maintained exploratory fisheries for toothfishes, and removed fishing effort limits for pelagic fisheries. Annex IH of Regulation 2023/194 is amended accordingly (Table 2).
- The Indian Ocean Tuna Commission (IOTC) has revised the EU quota for yellowfin tuna downwards for 2023. Annex IJ of Regulation 2023/194 is amended accordingly (Table 3).

Why?

- Regulation (EU) 2023/194 established individual EU Member States' quotas of fishing opportunities for albacore, bigeye tuna and swordfish stocks in the Atlantic Ocean, based on the total EU quota for 2023 before any adjustments for overfishing or underfishing. EU quotas for stocks in the ICCAT Convention area for 2023 were adjusted at ICCAT's annual meeting in November 2022. The EU is allowed to carry over a percentage of unused quota from 2021 to 2023.
- The SPRFMO adopted these measures at its 11th annual meeting in 2023. The provisions apply retroactively.
- The EU's quotas for yellowfin tuna are revised downwards in line with its stock rebuilding plan.

Timeline

The fishing opportunities provided for in Regulation (EU) [2023/194](#) apply from 1 January 2023. To avoid any interruption of fishing activities, Regulation [2023/730](#) also applies retroactively from **1 January 2023**. The Regulation entered into force on 4 April 2023.

What are the major implications for exporting countries?

The proposed amendments will apply to EU fleets fishing in waters managed by RFMOs. There are no implications for exporting countries.

Background

Regulation (EU) [2023/194](#) fixes fishing opportunities in 2023. Total allowable catches can be amended during that period, taking into account scientific advice and outcomes of consultations with non-EU countries and Regional Fisheries Management Organisations ([RFMOs](#)). Catch and effort limits, as well as revised quotas adopted by RFMOs that the EU participates in, must be implemented in EU law.

For stocks subject to an analytically determined total allowable catch (TAC), an EU Member State may ask the European Commission, before 31 October of the year in which it applies, to transfer a maximum of 10% of its allocated quota to the following year (Regulation [847/96](#), Art. 4). Unused Member States' quotas for stocks regulated by RFMOs cannot be transferred that

way because quotas for such stocks are set by RFMO rules. Withholding and transfer of these quotas under Regulation 847/96 (Art. 4) is not permitted for these stocks.

Under ICCAT recommendations, the EU may carry over a percentage of its unused quota of fishing opportunities from 2 years ago or 1 year ago to a given year. Regulation 2023/194 set EU quota for ICCAT stocks for 2023. These quotas were adjusted by ICCAT in November 2022, allowing the EU to request to carry over any of its unused EU quota from 2021 to 2023 at a set percentage.
