

Ban on some co-formulants in pesticides

Published by AGRINFO on 25 Sep 2025

EU to ban the use of 14 co-formulants in pesticides

[Draft](#) Commission Regulation amending Annex III to Regulation (EC) No 1107/2009 of the European Parliament and of the Council by adding fourteen co-formulants which are not accepted for inclusion in plant protection products [[download](#)]

[Draft](#) Annex [[download](#)]

Update

The European Commission has identified 14 co-formulants that it considers an unacceptable risk, and proposes to ban their use in pesticides. The use of these 14 substances will also be banned in adjuvants that are mixed with pesticides to enhance their effectiveness.

Co-formulants are used in pesticides to make them easy to handle and apply. They can only be used in pesticides if they are not harmful to humans or the environment.

The Commission is collecting feedback from stakeholders on these proposed changes. Interested stakeholders, including from non-EU countries, can provide feedback via the EU's [Have Your Say](#) webpage.

What is changing?

The European Commission proposes to ban the use of the following co-formulants (substances contained in pesticides to make them easier to apply):

- acetaldehyde
- propylene oxide
- cumene
- dodecamethylcyclohexasiloxane; (D6)
- decamethylcyclopentasiloxane; (D5)
- octamethylcyclotetrasiloxane; (D4)
- 2-(2'-hydroxy-3'-tert-butyl-5'-methylphenyl)-5-chlorobenzotriazole
- 2-pyrrolidone

- distillates (petroleum) solvent-dewaxed light paraffinic with a content of $\geq 3.0\%$ DMSO-extract (measured by IP 346)
- 3,5,7-triaza-1-azoniatricyclo[3.3.1.1^{3,7}] decane, 1-(3-chloro-2-propen-1-yl)-, chloride
- phosphinic acid, bis(perfluoro-C6-12-alkyl) derivatives
- 1,4-dioxane
- 2-(4-tert-butylbenzyl)propionaldehyde
- acetophenone.

Adjuvants (substances used to improve the effectiveness of pesticides) will also no longer be permitted to contain these co-formulants.

Why?

Co-formulants are not allowed to be used in plant protection products if their residues can harm human or animal health, or the environment, plants, or plant products.

The specific reasons for banning each co-formulant are set out in the [draft Annex](#) to the proposed Regulation. They include high carcinogenicity, high mutagenicity, and high toxicity to reproduction (all category 1A or 1B); and risks to the environment such as persistent organic pollutants.

Timeline

The European Commission plans to adopt this Regulation in the first quarter of 2026. EU Member States will have to withdraw or amend authorisations of pesticides and adjuvants containing the banned co-formulants within 2 years.

What are the major implications for exporting countries?

Manufacturers of pesticides for the EU market may have to seek alternative co-formulants and amend existing authorisations of products. This may have an impact on the availability of certain pesticides for farmers.

Because pesticide maximum residue levels (MRLs) only apply to the active substances in pesticides, not to co-formulants or adjuvants, these changes will not have an immediate impact on imported products.

Background

Regulation [1107/2009](#) permits the European Commission to review co-formulants at any time (Art. 27), and to ban those that are unacceptable according to the criteria in the Annex of Regulation [2023/574](#).
