

Benthiavalicarb: approval not renewed by EU

Published by AGRINFO on 10 Aug 2023; Revised 10 May 2024

EU has not renewed approval of benthiavalicarb

Commission Implementing Regulation (EU) [2023/2657](#) of 6 November 2023 concerning the non-renewal of the approval of the active substance benthiavalicarb, in accordance with Regulation (EC) No 1107/2009 of the European Parliament and of the Council, and amending Commission Implementing Regulation (EU) No 540/2011

Update

The European Commission has decided not to renew approval of the active substance benthiavalicarb. This is due to concerns about potential adverse effects on human health. EU Member States will have to withdraw authorisations for products containing benthiavalicarb.

A reduction in the maximum residue levels (MRLs) to the limit of determination (LOD, the lowest level that can be detected using the most modern and reliable analytical methods) is expected in 2025, with possible impacts on exporters of grapes and tomatoes.

What is changing?

The Commission has decided not to renew approval for the active substance benthiavalicarb. European farmers will therefore no longer be able to use pesticides containing benthiavalicarb.

For an overview of all withdrawals, see [Latest pesticide non-renewals, withdrawals & restrictions](#).

Why?

Approval for the use of benthiavalicarb in the EU was set to expire on 15 November 2024. An application for renewal was submitted and evaluated.

[EFSA \(2021\)](#) identified several concerns, particularly carcinogenic potential and endocrine-disrupting properties of benthiavalicarb that may cause adverse effects in humans.

The Commission has therefore not renewed approval for this substance.

Timeline

This Regulation applies from **11 December 2023**.

EU producers will be permitted to use stocks of products containing benthiavalicarb until **13 December 2024**.

A revision of benthiavalicarb MRLs is expected in 2025.

What are the major implications for exporting countries?

Where active substances are not reapproved, or are withdrawn or restricted, the European Commission usually also lowers or removes MRLs. These are typically set at the LOD or default level of 0.01 mg/kg. Decisions on active substances serve as an early indication of upcoming MRL changes and the need to adapt agricultural practices for produce exported to the EU. A review of benthiavalicarb MRLs could have a particular impact on exporters of grapes and tomatoes.

Recommended Actions

Suppliers of grapes and tomatoes currently using benthiavalicarb should review current agricultural practices and start to seek alternative solutions in anticipation of changes to EU MRLs.

Import tolerance MRLs for specific products can be requested (see Background), although the process is complex and requires a lot of data.

Background

Pesticide active substances are approved for up to a maximum of 15 years. Manufacturers may apply for reapproval for a period not exceeding 15 years. Work programmes have been developed by EU Member State authorities and EFSA for the systematic review of active substances. In some cases, active substances are not reapproved or manufacturers do not seek reapproval, so the substance is no longer authorised after the expiry date.

The approval of active substances is sometimes withdrawn before the approval expiry date, if specific consumer health or environmental issues are identified. In some cases, active substances are not withdrawn but their use may be restricted.

Where an authorisation for an active substance is withdrawn or expires due to non-approval or non-renewal, the Commission will prepare a draft measure to delete the relevant existing

maximum residue levels (MRLs). In practice, the Commission starts this procedure once all existing authorisations for that active substance have been revoked. MRLs are either set to a default value of 0.01 mg/kg, or to the appropriate limit of quantification (based on specific data on analytical feasibility). MRLs based on the Codex MRLs (CXLs) are not deleted if there is no risk to EU consumers. Changes to MRLs are always notified to the WTO Sanitary and Phytosanitary (SPS) Committee.

The timing of changes to MRLs as a result of the withdrawal or non-approval of active substances is difficult to predict. In its review of pesticide policy, the Commission committed to “enhance communication efforts on the impacts of the PPP Regulation on MRLs as well as the timing of the various procedures to make the EU system more predictable for non-EU countries, including for the cut-off criteria” ([European Commission 2020](#)).

[Import tolerances](#) can be requested in anticipation of potential changes to MRLs (see the Commission’s [Overview of import tolerances](#)). Applicants must demonstrate the existence of relevant good agricultural practices (GAP) in the country of origin, and the safety of the proposed MRLs. Guidelines are available on the requirements and process for the establishment of MRLs, including import tolerances ([European Commission 2021](#)).
