

# Feed additives: November/December 2024 authorisations, reauthorisations, and intended uses

Published by AGRINFO on 20 Jan 2025

EU authorises or reauthorises certain feed additives, and updates list of intended uses – November/December 2024

Commission Implementing Regulations [2024/2899](#), [2024/3162](#), [2024/3166](#), [2024/3167](#), [2024/3168](#)

## Update

An overview of the latest authorisations and reauthorisations of feed additives, and updates to the list of intended uses in animal nutrition for target animals.

## Impacted products

Feed additives

## What is changing?

### Authorisations and reauthorisations

In November and December 2024, the EU authorised and reauthorised the feed additives listed in Table 1. These authorisations and reauthorisations are based on opinions published by the European Food Safety Authority (EFSA [2019](#), [2023a](#), [2023b](#), [2024a](#), [2024b](#)). The conditions of use are described in the respective Regulations.

### Updates to list of intended uses

The use of glycosylated 1,25-dihydroxycholecalciferol from *Solanum glaucophyllum* extract to reduce the risk of milk fever and subclinical hypocalcaemia (low calcium levels) in cows is now included in the list of intended uses of feed for particular nutritional purposes (Regulation [2024/2899](#)).

## Why?

Applications for these authorisations and reauthorisations were considered by the Reference Laboratory set up by the Feed Additives Regulation ([1831/2003](#)).

[EFSA \(2022\)](#) concluded that glycosylated 1,25-dihydroxycholecalciferol from *S. glaucophyllum* extract, administered orally in a complementary feed from 9 days before calving to immediately before calving, has the potential to prevent hypocalcaemia in dairy cows.

## Timeline

The authorisations and reauthorisations remain valid until the end dates listed in Table 1.

## What are the major implications for exporting countries?

With these authorisations, more feed additives will be available on the market. Authorisations and renewals are valid for 10 years. All feed additives must be used as specified in the Annex to each Regulation.

## Recommended Actions

Non-EU countries producing feed additives, compound feed, and feed materials for export to the EU are recommended to check their status in the EU [Feed Additives](#) register.

To be able to filter and to see more information, you can download the register in Excel format (see [Food and Feed Information Portal webpage](#) > Feed Additives > Download Register in Excel format).

## Background

The procedure for authorising the placing on the market and use of feed additives is set out in Regulation [1831/2003](#). For the latest updates on feed additives, see the EU [Feed Additives](#) register.

## Table & Figures

Table 1 New and renewed authorisations of feed additives (November/December 2024)				
Regulation	Additive	Use	Target	End date <sup>[1]</sup>
2024/3162	Ferric tyrosine chelate	Other zootechnical additives	Chickens (fattening, laying); turkeys and minor poultry (fattening, rearing to point of lay)	8 Jan 2035
2024/3166	<i>Bacillus velezensis</i> ATCC PTA-6737 (previously <i>Bacillus subtilis</i> ATCC PTA-6737)	Gut flora stabilisers	Chickens (laying, fattening); minor poultry (except laying)	9 Mar 2033
			Pigs (fattening), sows, piglets (all <i>Suidae</i> ); turkeys (breeding, fattening)	8 Jan 2035
2024/3167	Cyanocobalamin (vitamin B12) produced with <i>Ensifer adhaerens</i> CGMCC 19596	Nutritional additives (vitamins, pro-vitamins, and chemically well-defined substances having similar effect)	All animal species	
2024/3168	Zinc L-selenomethionine	Nutritional additives (compounds of trace elements)	All animal species	
1. Authorisations/ reauthorisations remain valid for 10 years from entry into force until the date mentioned in the column "End date". <div style="text-align: center;">    <a href="http://www.agrinfo.eu">www.agrinfo.eu</a> </div>
