

Feed additives: Reauthorisations, amendments, and corrections

Published by AGRINFO on 30 Aug 2024

Commission Implementing Regulations <u>2024/1810</u>, <u>2024/1839</u>, <u>2024/1989</u>, <u>2024/2039</u>, <u>2024/2040</u>

What is changing and why?

Reauthorisations

In July and August 2024, the EU authorised or reauthorised the feed additives listed in Table 1. These authorisations are based on opinions published by the European Food Safety Authority (EFSA). The conditions of use are described in the respective Regulations.

Amendments and corrections

- Regulation 2024/1839 deletes Schinopsis lorentzii as a source of red quebracho extract because it was erroneously authorised as a source, despite not being requested as such in the application for authorisation.
- Regulation 2024/2039 deletes the feed additives sunflower absolute, sunflower oil, and sunflower tincture from Helianthus annuus from the Annex to Regulation 2023/1173 because they were erroneously included in that Annex despite being withdrawn from the EU market as feed additives for all animal species.
- Regulation 2024/2040 establishes transitional measures for the renewal of the authorisation
 of a preparation of 25-hydroxycholecalciferol produced by Saccharomyces cerevisiae CBS
 146008 because an earlier regulation (2024/1070) failed to lay down transitional measures to
 allow interested parties to adapt to these stricter terms of authorisation.

Timeline

The reauthorisations remain valid until the end dates listed in Table 1.

- Regulation 2024/1839 applies since 5 July. The feed additive, and premixtures, compound feed, and feed materials containing it, produced and labelled before 5 August 2024, may continue to be placed on the market and used until 5 January 2025.
- Regulation 2024/2039 applies since 31 July 2024.
- Regulation 2024/2040 applies retrospectively since 5 May 2024. The feed additive and premixtures containing that additive, if intended for chickens for fattening, turkeys for
