

Food additives: glycerol (E 422, E 475, E 476)

Published by AGRINFO on 04 Apr 2023; Revised 03 Oct 2023

EU puts in place stricter specifications for glycerol food additives

Commission Regulation (EU) [2023/1329](#) of 29 June 2023 amending Annex II to Regulation (EC) No 1333/2008 of the European Parliament and of the Council as regards the use of polyglycerol polyricinoleate (E 476) and the Annex to Commission Regulation (EU) No 231/2012 as regards specifications for glycerol (E 422), polyglycerol esters of fatty acids (E 475) and polyglycerol polyricinoleate (E 476)

Update

The EU has set more stringent specifications concerning the use of several food additives: glycerol (E 422), polyglycerol esters of fatty acids (E 475), and polyglycerol polyricinoleate (E 476).

Impacted products

processed products, edible ices, sauces

What is changing?

The European Commission has revised the specifications for the following food additives.

Glycerol (E 422)

- maximum limits for toxic elements including arsenic, lead, mercury and cadmium reduced
- identification method based on acrolein formation during heating and test for the presence of acrolein deleted
- maximum limit for acrolein included
- definition modified

Polyglycerol esters of fatty acids (E 475)

- maximum limits for toxic elements reduced
- maximum limits included for the sum of 3-monochloropropanediol (3-MCPD) and 3-MCPD fatty acid esters, glycidyl fatty acid esters, and erucic acid

- definition modified

Polyglycerol polyricinoleate (E 476)

- maximum limits for toxic elements reduced, including maximum limits for 3-MCPD and 3-MCPD fatty acid esters, and glycidyl fatty acid esters
- definition modified
- use in certain food categories modified (see Table 1).

Further details are set out in the Annexes of Regulation [2023/1329](#).

Why?

The changes are in response to the conclusions of recent scientific opinions on the safety and quality of these food additives (EFSA [2022a](#), [2022b](#), [2022c](#)).

Timeline

The Regulation applies from 20 July 2023.

Foods containing these additives that were placed on the EU market before the Regulation entered into force, and that comply with the old rules, may remain on the market for 6 months even if they do not comply with the new rules.

What are the major implications for exporting countries?

The changes to the EU Regulation on authorised food additives may have an impact on countries exporting food products containing these additives to the EU market.

If exporting countries fail to comply with the new EU regulations, their products may be rejected at the EU border and prevented from entering the market. This could result in financial losses for exporters and a disruption of trade relations between the exporting country and the EU.

Recommended Actions

Suppliers of processed foods containing these additives may need to adjust their manufacturing practices and/or safety and quality controls to meet the new requirements.

Background

The proposed Regulation amends the Annex to Commission Regulation (EU) No [231/2012](#), and lays down specifications for food additives listed in Annexes II and III to Regulation (EC) No [1333/2008](#).

Table & Figures

Table 1 Changes to Annex II – part E under Regulation 1333/2008				
Category	E number	Product	Maximum level (mg/l or mg/kg)*	Restrictions – exceptions
03 Edible ices	E 476	Polyglycerol polyricinoleate	4,000	Except sorbets
12.6 Sauces	E 476	Polyglycerol polyricinoleate	4,000	Only emulsified sauces with fat content of less than 20%
12.6 Sauces	E 476	Polyglycerol polyricinoleate	8,000	Only emulsified sauces with fat content of 20% or more
* mg/l for liquid form; mg/kg for solid form.  www.agrininfo.eu
