Update

This report summarises new and renewed approvals of pesticides by the European Union (EU) so far in 2025. It also lists extensions of EU approval in 2025 (Table 1), and changes in conditions of use.

What is changing?

Approvals

In May 2025, the EU approved elemental iron as a low-risk active substance.

In January 2025, the EU approved the basic substance *Vitis vinifera* seed extract (grape seed extract), and the low-risk active substances *Betabaculovirus phoperculellae* and *Bacillus velezensis* strain RTI301.

Renewals

In November 2025, the EU renewed the approval of gibberelins and gibberellic acid as low-risk active substances.

In October 2025, the EU renewed the approval of milbemectin.

In July 2025, the EU renewed the approval of quinolin-8-ol as a candidate for substitution until 30 June 2032.

In May 2025, the EU renewed the approval of lenacil until 30 June 2040.

In January 2025, the EU renewed the approval of mepiquat chloride until 29 February 2040.

Extensions and amendments

So far in 2025, the EU has extended approval of the substances listed in Table 1.

Timeline

A comprehensive list of active substances, their legal status, and expiry dates can be found in the European Commission's [Active substances, safeners and synergists](#) database.

Recommended Actions

Suppliers to the EU market should monitor developments in EU pesticide approvals when considering longer-term strategies on agricultural practices and pest management.

Background

Approvals

A plant protection product or pesticide contains one or several active substances. Active substances must meet the established approval criteria (Regulation [1107/2009](#), Art. 4), which include that there must be no harmful effects on human health or the environment.

Depending on their characteristics, some active substances can be approved as low-risk substances that fulfil certain criteria [Regulation [1107/2009](#), Annex II(5)]. Low-risk substances are approved for 15 years instead of the standard 10 years, and enjoy more favourable data protection (13 years). Authorisation procedures are generally also shorter.

Renewals of approval

The Commission has established a series of work programmes to manage the renewal process. Each substance is allocated to an EU [Member State](#) for evaluation.

If no application is received for extension of approval, the initial expiry date will remain.

Extensions of approval

If an application for renewal cannot be fully evaluated before the expiry date, the approval can be extended to allow the evaluation to be completed.
