

Maximum residue level for fenazaquin

Published by AGRINFO on 04 Jun 2024; Revised 19 Jan 2026

Draft Commission Regulation as regards maximum residue levels for cyflufenamid, fenazaquin and nicotine in or on certain products

Draft [Annex II](#)

What is changing and why?

The European Union (EU) proposes to increase the maximum residue level (MRL) for fenazaquin on sweet peppers/bell peppers, tomatoes, and aubergines/eggplants, following a request for modification of the existing MRLs. An evaluation by the European Food Safety Authority has concluded that the proposed MRLs are safe for consumers.

Timeline

The new MRLs summarised in Table 1 are expected to apply from **February 2026**.

For more information see the [full record](#) on the AGRINFO website – where you can also view the latest [AGRINFO Update](#) newsletters and [search](#) the database.

Tables & Figures

Table 1 Changes under discussion for fenazaquin maximum residue levels			
Food category	Products	Fenazaquin (mg/kg)	
		Existing MRL	Proposed MRL
Fruiting vegetables	Tomatoes	0.05	0.2
	Sweet peppers/bell peppers	0.01*	0.4
	Aubergines/eggplants	0.01*	0.2
