# Maximum residue level for propamocarb

Published by AGRINFO on 04 Jun 2024; Revised 21 Jul 2025

EU increases MRLs for propamocarb on radishes and Roman rocket/rucola

Commission Regulation (EU) <u>2025/1305</u> of 2 July 2025 amending Annexes II, III and IV to Regulation (EC) No 396/2005 of the European Parliament and of the Council as regards maximum residue levels for amidosulfuron, azoxystrobin, hexythiazox, isoxaben, picloram, propamocarb, sodium silver thiosulfate and tefluthrin in or on certain products

<u>Draft</u> Commission Regulation amending Annexes II and V to Regulation (EC) No 396/2005 of the European Parliament and of the Council as regards maximum residue levels for dimoxystrobin, ethephon and propamocarb in or on certain products

Draft Annex (PLAN/2024/1305 R2 DRAFT)

Commission Regulation (EU) <u>2024/1439</u> of 24 May 2024 amending Annexes II and III to Regulation (EC) No 396/2005 of the European Parliament and of the Council as regards maximum residue levels for fenazaquin, mepiquat and propamocarb in or on certain products

## **Update**

The European Union (EU) has increased the maximum residue levels (MRLs) for propamocarb on radishes and on Roman rocket/rucola.

# Impacted products

Lettuces, radishes, Roman rocket/rucola, honey and other apiculture products

## What is changing?

The EU has raised the MRLs for propamocarb on radishes (roots) from 3 to 8 mg/kg, and on Roman rocket/rucola (including small radish leaves) from 30 to 600 mg/kg.

Earlier in 2025, the European Commission informed the World Trade Organization Sanitary and Phytosanitary Measures (WTO SPS) Committee that it intends to lower the MRL for propamocarb on lettuces from 40 to 20 mg/kg (G/SPS/N/EU/801).

THE LATEST ON EU AGRI-FOOD POLICIES IMPACTING LOW-INCOME & MIDDLE-INCOME COUNTRIES

In May 2024, the EU raised the MRL for propamocarb on honey and other apiculture products from 0.05 to 15 mg/kg.

### Why?

Following an application for the MRL for propamocarb on honey to be modified, <u>EFSA (2023)</u> concluded that the proposed amendments are acceptable and do not signify a risk to consumer safety.

In its reasoned opinion on honey, EFSA observed that the current MRL for propamocarb on lettuce might lead to the acute reference dose (ARfD) being exceeded (EFSA 2023). EFSA subsequently reviewed an alternative good agricultural practice (GAP) with a lower MRL which is fully supported by data (EFSA in press).

Following a request to modify the MRLs for radish leaves and radishes, the European Food Safety Authority (EFSA 2024) concluded that the proposed MRLs are safe for consumers. Because small radish leaves are classified under the subgroup of Roman rocket/rucola, the EU has raised the MRLs for Roman rocket/rucola as well as for radish roots and small leaves.

### Timeline

The new MRLs on Roman rocket/rucola and radishes will apply from 23 July 2025.

The proposed MRL on lettuce is expected to apply from approximately **January 2026**.

## **Recommended Actions**

Feedback on the EU's proposed MRL on lettuce (<u>G/SPS/N/EU/801</u>) closed in February 2025. Suppliers of lettuces should review their use of propamocarb and assess whether any changes will be needed to existing GAP to ensure compliance with the new MRL.

## **Background**

MRLs are set in accordance with the rules set out in Regulation <u>396/2005</u>. For information on current MRLs for other substances, please consult the <u>EU Pesticide Residues database</u>.
