

Maximum residue level for propamocarb

Published by AGRINFO on 04 Jun 2024; Revised 21 Jul 2025

Commission Regulation (EU) [2025/1305](#) as regards maximum residue levels for amidosulfuron, azoxystrobin, hexythiazox, isoxaben, picloram, propamocarb, sodium silver thiosulfate and tefluthrin in or on certain products

[Draft](#) Commission Regulation as regards maximum residue levels for dimoxystrobin, ethephon and propamocarb in or on certain products

[Draft](#) Annex

Commission Regulation (EU) [2024/1439](#) as regards maximum residue levels for fenazaquin, mepiquat and propamocarb in or on certain products

What is changing and why?

The EU has raised the MRLs for propamocarb on radishes (roots) from 3 to 8 mg/kg, and on Roman rocket/rucola (including small radish leaves) from 30 to 600 mg/kg.

Earlier in 2025, the EU proposed to lower the maximum residue level (MRL) for propamocarb on lettuces from 40 to 20 mg/kg, following concerns about the safety of the current MRL.

In 2024, the EU raised the MRL for propamocarb on honey and other apiculture products from 0.05 to 15 mg/kg.

Actions

Feedback on the EU's proposed MRL on lettuce ([G/SPS/N/EU/801](#)) closed in February 2025. Suppliers of lettuces should review their use of propamocarb and assess whether any changes will be needed to existing GAP to ensure compliance with the new MRL.

Timeline

The new MRLs on Roman rocket/rucola and radishes apply from **23 July 2025**.

The proposed MRL on lettuces is expected to apply from approximately **January 2025**.
