

Maximum residue level for propamocarb

Published by AGRINFO on 04 Jun 2024; Revised 09 Feb 2026

Commission Regulation (EU) [2026/215](#) of 29 January 2026 amending Annexes II and V to Regulation (EC) No 396/2005 of the European Parliament and of the Council as regards maximum residue levels for dimoxystrobin, ethephon and propamocarb in or on certain products

Commission Regulation (EU) [2025/1305](#) of 2 July 2025 amending Annexes II, III and IV to Regulation (EC) No 396/2005 of the European Parliament and of the Council as regards maximum residue levels for amidosulfuron, azoxystrobin, hexythiazox, isoxaben, picloram, propamocarb, sodium silver thiosulfate and tefluthrin in or on certain products

Commission Regulation (EU) [2024/1439](#) of 24 May 2024 amending Annexes II and III to Regulation (EC) No 396/2005 of the European Parliament and of the Council as regards maximum residue levels for fenazaquin, mepiquat and propamocarb in or on certain products

What is changing and why?

The European Union (EU) has lowered the maximum residue level (MRL) for propamocarb on lettuces from 40 to 30 mg/kg, following concerns about the safety of the current MRL.

In 2025, the EU raised the MRLs for propamocarb on radishes (roots) from 3 to 8 mg/kg, and on Roman rocket/rucola (including small radish leaves) from 30 to 600 mg/kg.

In 2024, the EU raised the MRL for propamocarb in honey and other apiculture products from 0.05 to 15 mg/kg.

Actions

Suppliers of lettuces should review their use of propamocarb and assess whether any changes will be needed to existing good agricultural practice (GAP) to ensure compliance with the new MRL.

Timeline

The new MRL on lettuces applies from **19 August 2026**.

The MRLs on Roman rocket/rucola and radishes applied from **23 July 2025**.
