

Maximum residue level for tefluthrin

Published by AGRINFO on 18 Jul 2025

Commission Regulation (EU) <u>2025/1305</u> as regards maximum residue levels for amidosulfuron, azoxystrobin, hexythiazox, isoxaben, picloram, propamocarb, sodium silver thiosulfate and tefluthrin in or on certain products

What is changing and why?

The European Union (EU) has raised the maximum residue level (MRL) for tefluthrin from 0.01 to 0.08 mg/kg on horseradishes, Jerusalem artichokes, parsnips, parsley roots, and salsifies.

A request to modify the MRL on certain roots and tubers was submitted using the fast-track procedure. Because the data supporting the MRL for carrots can be extrapolated to horseradishes, Jerusalem artichokes, parsnips, parsley roots, and salsifies, the request was accepted by the European Commission.

Timeline

The new MRLs apply from 23 July 2025.
