

# Maximum residue levels for 2,4-DB

*Published by AGRINFO on 15 Sep 2023; Revised 16 Apr 2024*

## Regulation

Regulation (EU) [2024/1077](#) as regards maximum residue levels for 2,4-DB, iodosulfuron-methyl, mesotrione and pyraflufen-ethyl in or on certain products

## What is changing and why?

The EU has reduced the maximum residue levels (MRLs) for 2,4-DB in animal products as summarised in Table 1. Because of gaps in the data, confirming the safety of these MRLs for animal products has not been possible.

## Actions

Exporters of animal products should review the current presence of 2,4-DB in these products and, where necessary, take measures to exclude 2,4-DB from the supply chain.

## Timeline

The new MRLs will apply from **6 November 2024**.

For more information see the [full record](#) on the AGRINFO website – where you can also view the latest [AGRINFO Update](#) newsletters and [search](#) the database.

## Tables & Figures

Table 1 Changes to maximum residue levels for 2,4-DB			
Food category	Products	2,4-DB (mg/kg)	
		Old MRL	New MRL
Animal products	Muscle and fat (bovine, sheep, goat, equine and other farmed terrestrial mammals)	0.2	0.05*
	Liver (bovine, sheep, goat, equine and other farmed terrestrial mammals)	0.4	0.05*
	Kidney and edible offals (bovine, sheep, goat, equine and other farmed terrestrial mammals)	0.1	0.05*
	Milk (cattle, sheep, goat, horse)	1.5	0.05*
* Limit of determination.
