

Maximum residue levels for acrinathrin

Published by AGRINFO on 01 Jul 2023; Revised 19 Apr 2024

Regulation [2024/352](#) as regards maximum residue levels for (Z)-13-hexadecen-11-yn-1-yl acetate, (Z,Z,Z,Z)-7,13,16,19-docosatetraen-1-yl isobutyrate, acrinathrin, azimsulfuron, famoxadone, prochloraz and sodium hypochlorite in or on certain products

What is changing and why?

The European Commission has reduced the maximum residue levels (MRLs) for acrinathrin to the limit of determination (LOD) from 0.02 to 0.01 mg/kg on some products. Since 31 December 2021, acrinathrin is no longer permitted for use in the EU. (The LOD is the lowest level that can be detected using the most modern and reliable analytical methods.)

Actions

There are implications for exporters of fruits, fungi, oilseeds, sugar plants, and vegetables.

Timeline

The new MRLs will apply from **12 August 2024**.
