

Maximum residue levels for benomyl

Published by AGRINFO on 30 Nov 2023; Revised 10 Feb 2026

[Draft](#) Commission Regulation amending Annex II, III and V to Regulation (EC) No 396/2005 of the European Parliament and of the Council as regards maximum residue levels for benomyl, carbendazim and thiophanate-methyl in or on certain products

[Draft Annex V](#) [PLAN/2024/2763 v6]

What is changing and why?

The European Union (EU) proposes to set the maximum residue levels (MRLs) for benomyl at the limit of determination (LOD) for all products. (The LOD is the lowest level that can be detected using the most modern and reliable analytical methods.)

There are currently no MRLs for benomyl, which is included in the definition of carbendazim. This proposal sets separate MRLs for these two substances.

Actions

Suppliers to the EU market of all products should seek alternative chemical and non-chemical alternatives to the use of benomyl.

Competent authorities of countries that are members of the World Trade Organization can submit comments on the EU's proposal by emailing the [EU SPS Enquiry Point](#) until **6 April 2026**.

Timeline

The Regulation is expected to be published in July 2026 and will apply 6 months after publication.
