

Maximum residue levels for benthiavalicarb

Published by AGRINFO on 03 Apr 2025

[Draft](#) Commission Regulation as regards maximum residue levels for benfluralin, benthiavalicarb and penflufen in or on certain products

[Draft](#) Annex (PLAN-2024-1306 rev3)

What is changing and why?

The active substance benthiavalicarb is no longer approved in the EU (see [Benthiavalicarb: approval not renewed by EU](#)). The EU proposes to lower the maximum residue levels (MRLs) for this substance on grapes and tomatoes from 0.3 to 0.01 mg/kg. For other foods, the MRLs are already set at the limit of determination (LOD, the lowest level that can be detected using the most modern and reliable analytical methods), but the LODs on tree nuts, potatoes, algae, oilseeds, oil fruits, and cereals will also be lowered to reflect the development of more sensitive analytical methods.

Actions

Competent authorities of non-EU countries that are members of the World Trade Organization may comment on the EU proposal by emailing the [EU SPS Enquiry Point](#) until **24 May 2025** ([G/SPS/N/EU/843](#)).

Suppliers to the EU market of table and wine grapes and tomatoes must find alternative solutions to benthiavalicarb for use on these products by May 2026.

Timeline

The new MRLs will apply from approximately May 2026 – the precise date will be known once the Regulation is published.
