

Maximum residue levels for chitosan, fat distillation residues, hydrolysed proteins, and lavandulyl senecioate

Published by AGRINFO on 09 Oct 2024

EU decides chitosan, fat distillation residues, hydrolysed proteins, and lavandulyl senecioate require no MRLs

Commission Regulation (EU) [2024/2612](#) of 7 October 2024 amending Annexes II, III and IV to Regulation (EC) No 396/2005 of the European Parliament and of the Council as regards maximum residue levels for chitosan, clopyralid, difenoconazole, fat distillation residues, flonicamid, hydrolysed proteins, and lavandulyl senecioate in or on certain products

Update

The EU has decided that no maximum residue levels (MRLs) are required in relation to use of the basic substance chitosan, and the low-risk substances fat distillation residues, hydrolysed proteins, and lavandulyl senecioate.

Impacted products

All products

What is changing?

The EU has decided that no MRLs are required in relation to the use of the basic substance chitosan, and the low-risk substances fat distillation residues, hydrolysed proteins, and lavandulyl senecioate.

Why?

Since the conditions of use of chitosan, fat distillation residues, hydrolysed proteins, and lavandulyl senecioate are not expected to leave residues in food or feed commodities, the European Commission has decided no MRLs are required. The MRLs for these substances were previously set at the default value of 0.01 mg/kg.

Timeline

The MRLs for these substances will be removed from **28 October 2024**.

Background

MRLs are set in accordance with the rules set out in Regulation [396/2005](#). For information on current MRLs for other substances, please consult the [EU Pesticide Residues database](#).
