

# Maximum residue levels for cyflumetofen

*Published by AGRINFO on 30 Nov 2022; Revised 25 Jan 2024*

Commission Regulation (EU) [2023/173](#) as regards maximum residue levels for 1-methyl-3-(trifluoromethyl)-1H-pyrazole-4-carboxamide (PAM), cycloxydim, cyflumetofen, cyfluthrin, metobromuron and penthiopyrad in or on certain products

Commission Regulation (EU) [2024/342](#) as regards maximum residue levels for cyflumetofen, oxathiapiprolin and pyraclostrobin in or on certain products

## What is changing and why?

In January 2024, the EU raised the maximum residue levels (MRLs) for gherkins and courgettes from 0.01 to 0.4 mg/kg, following a request for an MRL change.

In 2023, the EU reduced the MRLs for cyflumetofen on liver, kidney, and edible offals from 0.02 to 0.01 mg/kg, the limit of determination (LOD, the lowest level that can be detected using the most modern and reliable analytical methods).

## Actions

Exporters of certain bovine and equine animal products (liver, kidney, edible offals) should check for residues of cyflumetofen.

## Timeline

The new MRLs on gherkins/courgettes apply from **12 February 2024**.
