

# Maximum residue levels for desmedipham

*Published by AGRINFO on 01 Aug 2023; Revised 01 Feb 2024*

## EU lowers MRLs for desmedipham to limit of determination for all products

Commission Regulation (EU) [2024/345](#) of 22 January 2024 amending Annexes II, III and V to Regulation (EC) No 396/2005 of the European Parliament and of the Council as regards maximum residue levels for desmedipham, etridiazole, flurtamone, profoxydim, difenacoum and potassium permanganate in or on certain products

### Update

The EU has reduced the maximum residue levels (MRLs) for desmedipham to the limit of determination (LOD, the lowest level that can be detected using the most modern and reliable analytical methods), for all products.

### What is changing?

The EU has reduced the MRLs for desmedipham to the LOD for all products.

### Why?

Desmedipham is no longer permitted for use in the EU. The existing MRLs for desmedipham have therefore been deleted and set to the LOD.

For some substances, technical advances in analytical techniques now allow lower LODs, and in these cases the new MRLs will be set at these lower achievable levels.

### Timeline

The new MRLs will apply from **12 August 2024**.

Products exported before 12 August 2024 that comply with the old MRLs will not be removed from the EU market after 12 August, even if they do not comply with the new MRLs.

## Recommended Actions

Exporters of affected products should review their current use of desmedipham and look for possible alternative solutions in anticipation of these MRL changes.

## Background

MRLs are set in accordance with the rules set out in Regulation [396/2005](#). For information on current MRLs for other substances, please consult the [EU Pesticide Residues database](#).
