Maximum residue levels for difluoroacetic acid

Published by AGRINFO on 15 Dec 2023; Revised 18 Jul 2024

Regulation

<u>Draft</u> Commission Regulation as regards maximum residue levels for 1,4-dimethylnaphthalene, difluoroacetic acid (DFA), fluopyram and flupyradifurone in or on certain products

Annex II

What is changing and why?

The EU proposes to increase the MRLs for difluoroacetic acid as summarised in Table 1. A review of the existing MRLs did not identify a consumer health risk. The EU therefore proposes to adopt higher MRLs to avoid trade barriers when importing these crops.

Difluoroacetic acid is not itself a pesticide. It is produced in crops following application of the insecticide flupyradifurone.

Actions

Feedback on this proposal closed on 10 February 2024.

Timeline

Expected date of publication: August 2024.

The new MRLs are expected to apply from early 2025.
