

# Maximum residue levels for dimoxystrobin

Published by AGRINFO on 13 Dec 2024

EU proposes to amend MRLs for dimoxystrobin

Draft Commission Regulation amending Annexes II and V to Regulation (EC) No 396/2005 of the European Parliament and of the Council as regards maximum residue levels for dimoxystrobin, ethephon and propamocarb in or on certain products

Draft Annex: PLAN/2024/1305 R2 DRAFT

## Update

The European Commission has informed the World Trade Organization Sanitary and Phytosanitary Measures (WTO SPS) Committee that it intends to lower the maximum residue levels (MRLs) for dimoxystrobin to the limit of determination (LOD) on all products ([G/SPS/N/EU/801](#)). (The LOD is the lowest level that can be detected using the most modern and reliable analytical methods.) Revised MRLs will have impacts particularly on exporters of **sunflower seeds, rye, and wheat**.

## Impacted products

Sunflower seeds, rapeseeds/canola seeds, mustard seeds, rye, wheat, animal products (muscle, fat, liver, kidney, edible offals) from swine, cattle, sheep, goats, horses, poultry, other farmed animals, birds' eggs (chicken, duck, geese, quail), amphibians and reptiles, terrestrial invertebrate animals, wild terrestrial vertebrate animals

## What is changing?

The EU proposes to amend the MRLs for dimoxystrobin as summarised in Table 1.

In addition, the EU proposes to lower the LOD for dimoxystrobin on oilseeds and oil fruits from 0.05 to 0.01 mg/kg, and on animal products from 0.03 to 0.01 mg/kg.

## Why?

Because the EU's approval of dimoxystrobin has not been renewed (Regulation (EU) [2023/1436](#)), the MRLs have been lowered to the LOD on all products. See [Dimoxystrobin: non-renewal of EU approval](#).

The EU reference laboratories for pesticide residues were consulted to assess the need to adapt certain LODs. For dimoxystrobin, the laboratories have proposed product-specific LODs that are analytically achievable, ensuring compliance with updated safety and monitoring standards.

## Timeline

New MRLs are expected to apply from approximately January 2026.

## Recommended Actions

Suppliers of **sunflower seeds**, **rye**, and **wheat** in particular should evaluate their current use of dimoxystrobin and explore possible alternative solutions in anticipation of these MRL changes.

Authorities in countries that are members of the WTO can provide feedback on the EU's proposal ([G/SPS/N/EU/801](#)) by emailing the [EU SPS Enquiry Point](#) until **3 February 2025**.

## Background

MRLs are set in accordance with the rules set out in Regulation [396/2005](#). For information on current MRLs for other substances, please consult the [EU Pesticide Residues database](#).
