

Maximum residue levels for dithianon on apples and pears

Published by AGRINFO on 03 Nov 2023; Revised 16 May 2024

EU reduces MRLs for dithianon on apples and pears

Commission Regulation (EU) [2024/1314](#) of 15 May 2024 amending Annex III to Regulation (EC) No 396/2005 of the European Parliament and of the Council as regards maximum residue levels for dithianon in or on certain products

Update

The European Commission has decided to reduce the maximum residue levels (MRLs) for dithianon on apples and pears.

Impacted products

Apples, pears

What is changing?

The EU has reduced the MRLs for dithianon on apples and pears from 3 to 1.5 mg/kg.

Why?

The European Food Safety Authority ([EFSA 2023](#)) identified that the acute reference dose (ARfD) of dithianon on apples and pears was exceeded with the current MRL, indicating a potential risk to consumers. Alternative good agricultural practices (GAP) were proposed which would allow a lowering of the MRLs to levels that do not pose a risk for consumers.

[EFSA \(2020\)](#) noted that the mutagenicity potential of the metabolite 1,4-naphthoquinone (a chemical intermediate for dithianon) remains uncertain. Therefore the acceptable daily intake (ADI) and ARfD values for 1,4-naphthoquinone are considered provisional.

Timeline

The new MRLs will apply from **5 December 2024**.

Recommended Actions

Suppliers of apples and pears to the EU market should review their current GAP to ensure that they will meet the new reduced MRLs by December 2024.

Background

MRLs are set in accordance with the rules set out in Regulation [396/2005](#). For information on current MRLs for other substances, please consult the [EU Pesticide Residues database](#).
