

Maximum residue levels for dithianon on apples and pears

Published by AGRINFO on 03 Nov 2023

Regulation

Maximum residue levels for dithianon on apples and pears

What is changing and why?

To prevent unacceptable risks to consumers, the Commission proposes to reduce the MRLs for dithianon on apples and pears from 3 to 1.5 mg/kg.

Actions

Competent authorities of countries that are members of the World Trade Organization (WTO) can submit comments on the EU's proposal by emailing the [EU SPS Enquiry Point](#) until 29 December 2023.

Suppliers of apples and pears to the EU market should review current agricultural practices (GAPs) to ensure that they will meet the new reduced dithianon MRLs by early 2025.

Timeline

The new MRLs are expected to apply from early 2025.
