Maximum residue levels for dodine

Published by AGRINFO on 24 Jun 2026; Revised 17 Oct 2026

MRL for dodine on grapes will increase from 5 November 2026

Commission Regulation (EU) 2026/2289 of 15 October 2026 amending Annex II to Regulation (EC) No 396/2005 of the European Parliament and of the Council as regards maximum residue levels for acequinocyl, deltamethrin, dodine, maleic hydrazide, pinoxaden and prothioconazole in or on certain products

Update

The European Union (EU) has increased the maximum residue level (MRL) for dodine on grapes from 0.01 to 2 mg/kg.

Impacted products

Wine grapes, table grapes

What is changing?

The EU has increased the MRL for dodine on table grapes and wine grapes from the limit of determination (LOD) of 0.01 mg/kg to 2 mg/kg. (The LOD is the lowest level that can be detected using the most modern and reliable analytical methods.)

Why?

An application for a change of MRL by the producer of dodine was evaluated by the European Food Safety Authority, and the requested change was found to be safe for consumers (EFSA 2025).

Timeline

The new MRL applies from **5 November 2026**.

Background

MRLs are set in accordance with the rules set out in Regulation 396/2005. For information on current MRLs for other substances, please consult the EU Pesticide Residues database. For further information on the setting of import tolerances, see Pesticide residue import tolerance MRLs explained.
