

## Maximum residue levels for fenarimol

*Published by AGRINFO on 27 Oct 2025*

[Draft](#) Commission Regulation as regards maximum residue levels for azocyclotin, chlorfenapyr, cyhexatin, diazinon, dicofol, endosulfan, fenarimol, fenpropathrin and profenofos in or on certain products

[Draft](#) Annex

### What is changing and why?

The European Union (EU) is discussing the reduction of fenarimol maximum residue levels (MRLs) on certain fruits and vegetables to 0.01 mg/kg. There will be impacts on apricots, cherries, peaches, grapes, strawberries, raspberries, currants, gooseberries, bananas, cucumbers, gherkins, courgettes, melons, watermelons, and hops (see Table 1). This is because the European Food Safety Authority was unable to complete a risk assessment of this pesticide.

### Actions

Suppliers to the EU market of apricots, cherries, peaches, grapes, strawberries, raspberries, currants, gooseberries, bananas, cucumbers, gherkins, courgettes, melons, watermelons, and hops should review their existing use of fenarimol and start to identify alternative pesticides.

### Timeline

This Regulation is still under discussion. It is expected that new MRLs will apply from late 2026 or early 2027.
