

Maximum residue levels for fenpyroximate

Published by AGRINFO on 29 Jun 2023

EU increases MRLs for fenpyroximate on beans and animal products

Commission Regulation (EU) [2023/1069](#) of 1 June 2023 amending Annex II to Regulation (EC) No 396/2005 of the European Parliament and of the Council as regards maximum residue levels for bixafen, cyprodinil, fenhexamid, fenpicoxamid, fenpyroximate, flutianil, isoxaflutole, mandipropamid, methoxyfenozide, and spinetoram in or on certain products

Update

On 2 June 2023 the EU published a Regulation increasing the MRLs for fenpyroximate on beans and animal products.

Impacted products

beans (without pods), products from swine, cattle, sheep, goats, horses and other farmed terrestrial animals

What is changing?

The EU has increased the MRLs for fenpyroximate as summarised in Table 1.

Why?

New Codex MRLs (CXLs) for fenpyroximate have been adopted. [EFSA \(2022\)](#) has not identified a consumer health risk for these CXLs, so they have been adopted as EU MRLs.

Timeline

The new EU MRLs for fenpyroximate will apply from **22 June 2023**.

Background

MRLs are set in accordance with the rules set out in Regulation [396/2005](#). For information on current MRLs for other substances, please consult the [EU Pesticide Residues database](#).

Table & Figures

Table 1 Changes to maximum residue levels for fenpyroximate			
Food category	Products	Fenpyroximate (mg/kg)	
		Old MRL	New MRL
Legume vegetables	Beans (without pods)	0.01*	0.05
Animal products	Fat from swine, cattle, sheep, goats, horses and other farmed terrestrial animals	0.1	0.2
	Liver, kidney and edible offals from swine, cattle, sheep, goats, horses and other farmed terrestrial animals	0.5	0.8
