

Maximum residue levels for fuberidazole

Published by AGRINFO on 09 Jan 2025; Revised 17 Jul 2025

Commission Regulation (EU) [2025/1163](#) as regards maximum residue levels for chlorpropham, fuberidazole, ipconazole, methoxyfenozide, S-metolachlor and triflusulfuron in or on certain products

What is changing and why?

Fuberidazole is no longer permitted for use in the European Union, therefore the EU decided to set all maximum residue levels (MRLs) for fuberidazole at the product-specific limits of determination (LODs). The LOD on some cereals (wheat, rye, oats, and barley) are lowered from 0.05 to 0.01 mg/kg. (The LOD is the lowest level that can be detected using the most modern and reliable analytical methods.)

Actions

Laboratories testing for fuberidazole in products for export to the EU market should verify that their analytical methods are able to test at the proposed new LODs.

Timeline

The new MRLs apply from **6 January 2026**.
