

Maximum residue levels for isoxaben

Published by AGRINFO on 30 Nov 2022; Revised 17 Jul 2025

EU increases MRLs for isoxaben on dried beans and peas

Commission Regulation (EU) [2025/1305](#) of 2 July 2025 amending Annexes II, III and IV to Regulation (EC) No 396/2005 of the European Parliament and of the Council as regards maximum residue levels for amidosulfuron, azoxystrobin, hexythiazox, isoxaben, picloram, propamocarb, sodium silver thiosulfate and tefluthrin in or on certain products

Commission Regulation (EU) [2023/1719](#) of 8 September 2023 amending Annexes II and IV to Regulation (EC) No 396/2005 of the European Parliament and of the Council as regards maximum residue levels for isoxaben, metaldehyde, *Metarhizium brunneum* strain Ma 43, paclobutrazol and Straight Chain Lepidopteran Pheromones (SCLP) in or on certain products

Commission Regulation (EU) [2023/466](#) of 3 March 2023 amending Annexes II, III and V to Regulation (EC) No 396/2005 of the European Parliament and of the Council as regards maximum residue levels for isoxaben, novaluron and tetraconazole in or on certain products

Update

The European Union (EU) has increased the maximum residue levels (MRLs) for isoxaben on dried beans and peas.

Impacted products

Almonds, chestnuts, hazelnuts, cobnuts, walnuts, apples, pears, quinces, medlars, loquats, Japanese medlars, cherries, plums, table grapes, wine grapes, strawberries, blackberries, dewberries, raspberries, blueberries, cranberries, currants, gooseberries, rosehips, mulberries, azaroles, Mediterranean medlars, elderberries, carrots, horseradishes, parsnips, parsley roots, cucumbers, gherkins, melons, pumpkins, watermelons, chervil, chives, celery leaves, parsley, sage, rosemary, thyme, basil, edible flowers, laurel, bay leaves, thyme, peas (without pods), pulses (dried peas, beans), asparagus, barley, buckwheat and other pseudo-cereals, maize/corn, millet, proso millet, oats, rice, rye, sorghum, wheat, hops

What is changing?

In March 2023 the EU reduced the MRLs for isoxaben to the limit of determination (LOD, the lowest level that can be detected using the most modern and reliable analytical methods) on fruit, vegetables, cereals and hops, except for courgettes and beans without pods. The European Food Safety Authority (EFSA) applied the data for beans without pods to establish the same MRL for peas without pods. On 11 September 2023, the EU increased the MRL for isoxaben on gherkins, applying the data for courgettes to the MRL for gherkins.

On 3 July 2025, the EU increased the MRLs for isoxaben on dried beans and peas.

MRLs

The amendments to previous MRLs, including new MRLs for beans and peas (without pods), are shown in Table 1.

- The existing MRL for courgettes remains at 0.05 mg/kg.
- The MRL for gherkins was initially reduced to 0.01 mg/kg, but was revised to 0.05 mg/kg in September 2023 (the same as courgettes).
- The MRL for dried beans and peas was initially reduced to 0.01 mg/kg, but was revised to 0.02 mg/kg in July 2025 (the same as beans without pods).

LODs

For all fruits and vegetables not listed in Table 1, and for oilseeds and sugar plants, the LOD is decreased from 0.02 to 0.01 mg/kg. The LOD on teas, coffees, infusions and spices is increased from 0.02 to 0.05 mg/kg.

Why?

Following a review of existing isoxaben MRLs ([EFSA 2022](#)), it was recommended to lower the existing MRLs for fruits and vegetables – with the exception of courgettes and fresh beans without pods, for which there is sufficient data in support of current good agricultural practices (GAP).

A further request to modify the MRL on gherkins was submitted using the fast-track procedure. Because the data supporting the MRL for courgettes can be extrapolated to gherkins, that request was accepted by the European Commission.

A further request to modify the MRL on dried beans and peas was also submitted using the fast-track procedure. Because the data supporting the MRL for beans (without pods) can be extrapolated to dried beans and peas, that request was accepted by the European Commission.

Timeline

The lowered MRLs apply since **26 September 2023**.

The 0.05 mg/kg MRL for gherkins applies since **27 September 2023**.

The 0.02 mg/kg MRLs for dried beans and peas apply from **23 July 2025**.

Recommended Actions

Suppliers to the EU market of fruit, vegetables, cereals, and hops (with the exception of courgettes, gherkins, and beans/peas without pods) should check for current use of isoxaben on these products and seek alternative solutions to isoxaben. Suppliers of strawberries should verify whether existing agricultural practices are compatible with the reduced MRL of 0.01 mg/kg.

Background

MRLs are set in accordance with the rules set out in Regulation [396/2005](#). For information on current MRLs for other substances, please consult the [EU Pesticide Residues database](#).

Table & Figures

Table 1 Maximum residue levels for isoxaben			
Food category	Products	Isoxaben (mg/kg)	
		Old MRL	New MRL
Tree nuts	Almonds, chestnuts, hazelnuts/cobnuts, walnuts	0.05	0.01*
Pome fruits	Apples, pears, quinces, medlars, loquats/Japanese medlars	0.05	0.01*
Stone fruits	Cherries, plums	0.05	0.01*
Berries and small fruits	Table grapes, wine grapes, blackberries, dewberries raspberries, blueberries, cranberries, currants, gooseberries, rosehips, mulberries, azaroles/Mediterranean medlars, elderberries	0.05	0.01*
	Strawberries	0.05	0.01
Root and tuber vegetables	Carrots, horseradishes, parsnips, parsley roots	0.05	0.01*
Fruiting vegetables	Cucumbers, melons, pumpkins, watermelons	0.05	0.01*
	Gherkins	0.01*	0.05
Leaf vegetables	Chervil, chives, celery leaves, parsley, sage, rosemary, thyme, basil and edible flowers, laurel/bay leaves, tarragon	0.05	0.01*
Legume vegetables	Peas (without pods)	0.05	0.02
	Beans (without pods)	0.02*	0.02
Stem vegetables	Asparagus	0.05	0.01*
Cereals	Barley, buckwheat and other pseudo-cereals, maize/corn, common millet/proso millet, oats, rice, rye, sorghum, wheat	0.1	0.01*
Hops		0.05	0.01*
Pulses	Beans, peas	0.01*	0.02
