

## Maximum residue levels for oxathiapiprolin

Published by AGRINFO on 14 Feb 2023; Revised 04 Jul 2025

Commission Regulation (EU) <u>2025/1164</u> as regards maximum residue levels for cyantraniliprole, cyflumetofen, deltamethrin, mefentrifluconazole, mepiquat and oxathiapiprolin in or on certain products

## What is changing and why?

The European Union (EU) has raised the maximum residue levels (MRLs) for oxathiapiprolin to 0.07 mg/kg on avocados, and to 0.5 mg/kg on currants, gooseberries, and rosehips. This is in line with the new Codex MRLs (CXLs).

These MRLs were previously set at 0.01 mg/kg, the limit of determination (LOD, the lowest level that can be detected using the most modern and reliable analytical methods).

The EU aligns MRLs with CXLs where they are not considered to be a concern for consumer safety.

## **Timeline**

The new MRLs on avocados, currants, gooseberries, and rosehips apply from 6 July 2025.
