

Maximum residue levels for pinoxaden

Published by AGRINFO on 24 Jun 2026

[Draft](#) Commission Regulation as regards maximum residue levels for acequinocyl, deltamethrin, dodine, maleic hydrazide, pinoxaden and prothioconazole in or on certain products

[Draft](#) Annex [PLAN/2025/3053]

What is changing and why?

The European Union (EU) is discussing an increase in the maximum residue level (MRL) for pinoxaden on barley, rye, and wheat from 0.7 to 0.8 mg/kg. An application for a change of MRL by the producer of pinoxaden was evaluated by the European Food Safety Authority, and the requested changes were found to be safe for consumers.

Timeline

The new MRL is expected to apply in the second half of 2026.
