

Maximum residue levels for pyriproxyfen

Published by AGRINFO on 05 Mar 2023; Revised 19 Apr 2024

EU amends MRLs for pyriproxyfen for certain fruit and vegetables

Commission Regulation (EU) [2023/679](#) of 23 March 2023 amending Annexes II and III to Regulation (EC) No 396/2005 of the European Parliament and of the Council as regards maximum residue levels for pyridaben, pyridate, pyriproxyfen and triclopyr in or on certain products.

Commission Regulation (EU) [2023/1753](#) of 11 September 2023 amending Annexes II and III to Regulation (EC) No 396/2005 of the European Parliament and of the Council as regards maximum residue levels for pyriproxyfen in or on certain products.

Update

On 24 March 2023 the EU increased the maximum residue level (MRL) for pyriproxyfen on apricots to 0.4 mg/kg.

On 1 September 2023 the EU set the MRLs for pyriproxyfen to the limit of determination (LOD) on all products, except where current good agricultural practices (GAP) and Codex maximum residue limits (CXLs) were concluded to be safe for consumers. (The LOD is the lowest level that can be detected using the most modern and reliable analytical methods.)

These changes have implications for exports of pears, quinces, medlars, loquats, Japanese medlars, cranberries, apples, cranberries, tomatoes, peppers, aubergines, okra, cucumbers, and gherkins.

In addition, where possible, existing MRLs already set at the LOD have been lowered from 0.05 mg/kg to 0.01 or 0.02 mg/kg.

Impacted products

apricots, cherries, grapefruits, kumquats, lemons, limes, mandarins, oranges, apples, pears, quinces, medlars, loquats, Japanese medlars, cranberries, tomatoes, sweet peppers, bell peppers, aubergines, eggplants, okra, lady's fingers, cucumbers, gherkins, courgettes, watermelons

What is changing?

The EU has amended the MRLs for pyriproxyfen as summarised in Table 1.

In addition, MRLs set at the LOD of 0.05 mg/kg are lowered where possible to:

- 0.02 mg/kg for mangoes, herbs, and edible flowers
- 0.01 mg/kg for all other products (except herbal infusions, coffee beans, and cocoa beans which remain at 0.05 mg/kg).

Why?

[EFSA \(2022a\)](#) reviewed current MRLs for pyriproxyfen, taking into account MRLs that have been set by Codex Alimentarius and that are confirmed as safe for consumers.

Following a request to modify the MRL for pyriproxyfen, and the determination of safe levels for consumers by [EFSA \(2022b\)](#), the EU has accepted the proposed new MRL for apricots.

Timeline

The MRL adopted for pyriproxyfen on apricots applies from 13 April 2023.

The other amended MRLs apply from 2 April 2024.

Recommended Actions

Suppliers to the EU market of apples, tomatoes, peppers, aubergines, cucumbers, and gherkins must review existing use of pyriproxyfen to ensure conformity of their products with the new reduced pyriproxyfen MRLs by April 2024.

Suppliers to the EU market of pears, quinces, medlars, loquats, Japanese medlars, cranberries, and okra must ensure that alternative solutions are found to existing uses of pyriproxyfen on these products by April 2024.

Products exported before 2 April 2024 that comply with the old MRLs will not be removed from the EU market after 2 April, even if not compliant with new MRLs.

Background

MRLs are set in accordance with the rules set out in Regulation [396/2005](#). For information on current MRLs for other substances, please consult the [EU Pesticide Residues database](#).

Table & Figures

Table 1 Changes to maximum residue levels for pyriproxyfen			
Food category	Products	Pyriproxyfen (mg/kg)	
		Old MRL	New MRL
Citrus fruits	Grapefruits, oranges, lemons, limes, mandarins	0.6	0.7
Pome fruits	Apples	0.2	0.05
	Pears, quinces, medlars, loquats/ Japanese medlars	0.2	0.01*
Stone fruits	Apricots	0.05*	0.4
	Cherries	1	1.5
Berries and small fruits	Strawberries	0.05*	0.05
	Cranberries	1	0.01*
Miscellaneous fruits	Kumquats	0.05*	0.5
Fruiting vegetables	Tomatoes	1	0.7
	Sweet peppers/ bell peppers, aubergines/ eggplants	1	0.6
	Okra/ lady's fingers	1	0.01*
	Cucumbers, gherkins	0.1	0.04
	Courgettes	0.05*	0.04
	Watermelons	0.05*	0.02
* Limit of determination. Shading indicates a decrease in MRL.
