

# Maximum residue levels for *Pythium oligandrum* strain M1, and *Trichoderma atroviride* strains AGR2 and AT10

Published by AGRINFO on 31 Jan 2024

EU decided decides no MRLs needed for *Trichoderma atroviride* and *Pythium oligandrum* strains

Commission Regulation (EU) [2024/246](#) of 16 January 2024 amending Annex IV to Regulation (EC) No 396/2005 of the European Parliament and of the Council as regards *Pythium oligandrum* strain M1, *Trichoderma atroviride* strain AGR2 and *Trichoderma atroviride* strain AT10

## Update

The EU has decided that no maximum residue levels (MRLs) are required in relation to the use of the low-risk pesticides *Pythium oligandrum* strain M1, *Trichoderma atroviride* strain AGR2, and *Trichoderma atroviride* strain AT10

## What is changing?

The EU has decided that for the following, which it classifies as “low-risk substances”, no MRLs need to be set for *Pythium oligandrum* strain M1, *Trichoderma atroviride* strain AGR2, and *Trichoderma atroviride* strain AT10. The MRLs for these substances were previously set at the default value of 0.01 mg/kg.

## Why?

Before the adoption of this Regulation, no specific MRLs for these strains had been set, so the default value of 0.01 mg/kg applied. Following reviews of risks to consumers by EFSA ([2020](#), [2022a](#), [2022b](#)), the EU concluded there is no need to establish MRLs for these strains.

## Timeline

This Regulation will apply from 6 February 2024.

## Background

MRLs are set in accordance with the rules set out in Regulation [396/2005](#). For information on current MRLs for other substances, see the [EU Pesticide Residues database](#).
