

Maximum residue levels for trifloxystrobin

Published by AGRINFO on 03 Dec 2023; Revised 22 May 2024

Commission Regulation (EU) [2024/1342](#) as regards maximum residue levels for deltamethrin, metalaxyl, thiabendazole and trifloxystrobin in or on certain products

What is changing and why?

The EU has decided to reduce the maximum residue levels (MRLs) for trifloxystrobin for passion fruit and Chinese cabbage to 0.01 mg/kg, the limit of determination (LOD, the lowest level that can be detected using the most modern and reliable analytical methods). This change is due to insufficient data.

Changes to MRLs for other products are summarised in Table 1.

Actions

Suppliers of affected products should review their current use of trifloxystrobin and assess whether any changes will be needed to existing good agricultural practices (GAP), or start looking for possible alternative solutions in anticipation of these MRL changes.

Timeline

The new MRLs will apply from **11 December 2024**. Products exported before 11 December 2024 that comply with the old MRLs will not be removed from the EU market after that date, even if they do not comply with the new MRLs.

Tables & Figures

Table 1 Changes to maximum residue levels for trifloxystrobin			
Food category	Products	Trifloxystrobin (mg/kg)	
		Old MRL	New MRL
Miscellaneous fruits	Passionfruits/maracujas	4	0.01*
Fruiting vegetables	Sweet peppers/bell peppers	0.4	0.9
Brassica vegetables	Chinese cabbages/pe-tsai	3	0.01*
	Kales	3	2
Leaf vegetables	Chervil, chives, celery leaves, parsley, sage, rosemary, thyme, basil and edible flowers, laurel/bay leaves, tarragon	15	30
Legume vegetables	Beans (with pods)	1	0.8
Cereals	Oats	0.4	0.3
Sugar plants	Chicory roots	0.01*	0.02
Products of animal origin	Honey	0.05*	0.07
* Limit of determination. <div>  www.agrininfo.eu </div>
