

# Maximum residue levels for triflumizole

*Published by AGRINFO on 30 Jan 2023*

EU reduces MRLs for triflumizole on tomatoes, aubergines, cucumbers, gherkins and courgettes

Commission Regulation (EU) [2023/147](#) of 20 January 2023 amending Annexes II, III and V to Regulation (EC) No 396/2005 of the European Parliament and of the Council as regards maximum residue levels for cyromazine, topramezone and triflumizole in or on certain products

## Update

The EU has reduced MRLs for triflumizole to the default limit of determination (LOD; 0.01–0.1 mg/kg) on all products, applicable from August 2023. There will be potential impacts on suppliers of tomatoes, aubergines, cucumbers, gherkins and courgettes.

## Impacted products

tomatoes, aubergines, cucumbers, gherkins, courgettes

## What is changing?

The changes to MRLs are listed in Table 1.

## Why?

The approval of the use of triflumizole in the EU expired on 30 June 2020 and no applications for its renewal were submitted.

## Timeline

The new MRLs will apply from 12 August 2023. For products imported into the EU before that date, the old MRLs will apply.

## Recommended Actions

Suppliers of tomato, aubergine, cucumber, gherkins and courgettes on which triflumizole is currently used should seek alternative substances or adapt current agricultural practices to ensure compliance by October 2023.

## Background

MRLs are set in accordance with the rules set out in Regulation [396/2005](#). For information on current MRLs for other substances, please consult the [EU Pesticide Residues database](#).

## Table & Figures

Table 1 Maximum residue levels for triflumizole			
Food category	Products	Triflumizole <sup>1</sup> (mg/kg)	
		Old MRL	New MRL
Fruiting vegetables	Tomatoes, aubergines/eggplants	1.5	0.02*
	Cucumbers, gherkins, courgettes	0.5	0.02*

1 Triflumizole and metabolite FM-6-1(N-(4-chloro-2- trifluoromethylphenyl)-n-propoxyacetamide), expressed as triflumizole.  
 \* Limit of determination.
