

Maximum residue levels for triflumuron

Published by AGRINFO on 05 Mar 2023; Revised 23 May 2024

Commission Regulation (EU) [2024/1355](#) as regards maximum residue levels for benzovindiflupyr, chlorantraniliprole, emamectin, quinclorac, spiromesifen, and triflumuron in or on certain products

Commission Regulation (EU) [2023/2382](#) as regards maximum residue levels for carbetamide, carboxin and triflumuron in or on certain products

What is changing and why?

The EU has aligned its maximum residue levels (MRLs) for triflumuron on animal products with MRLs adopted by Codex (see Table 1).

Earlier changes to the MRLs for triflumuron following its non-renewal for use in the EU are set out in Table 2.

Actions

Suppliers who sell apples, pears, apricots, peaches, and plums had to find ways to grow these crops without using triflumuron by April 2024.

Products that were shipped before 25 April 2024, and that meet the old rules for MRLs, will not be taken off the EU market after 25 April, even if they do not meet the new MRLs.

Timeline

The new MRLs for triflumuron on animal products set out in Table 1 apply from **11 June 2024**.

The MRLs for triflumuron set out in Table 2 (Regulation [2023/2382](#)) have applied from 25 April 2024.

Tables & Figures

| Table 1 Maximum residue levels for triflumuron (from 11 June 2024) | | | |
|--|---|---------------------|---------|
| Food category | Products | Triflumuron (mg/kg) | |
| | | Old MRL | New MRL |
| Oilseeds | Soya beans | 0.01* | 0.1 |
| Products of animal origin | Muscle, kidney, liver and edible offals from pigs, cattle, sheep, goats, horses, and other farmed terrestrial animals | 0.01* | 0.05 |
| | Fat from pigs, cattle, sheep, goats, horses, and other farmed terrestrial animals | 0.01* | 0.1 |
