

Maximum residue levels for triflusulfuron

Published by AGRINFO on 09 Jan 2025

Draft Commission Regulation as regards maximum residue levels for chlorpropham, fuberidazole, ipconazole, methoxyfenozide, S-metolachlor and triflusulfuron in or on certain products

Draft Annex

What is changing and why?

As triflusulfuron is no longer approved for use in the EU, the EU proposes to set all maximum residue levels (MRLs) to the product-specific limits of determination (LOD, the lowest level that can be detected using the most modern and reliable analytical methods). The LOD on tree nuts, oil seeds, and oil fruits will also be lowered from 0.02 to 0.01 mg/kg.

Actions

Competent authorities of non-EU countries that are members of the World Trade Organization may comment on the EU proposal by emailing the [EU SPS Enquiry Point](#) until **14 February 2025** ([G/SPS/N/EU/802](#)).

Timeline

The new MRLs will apply from approximately March 2026 – the precise date will be known once the Regulation is published.
