

Maximum residue levels on radish leaves

Published by AGRINFO on 28 Feb 2024; Revised 17 Jul 2024

Regulation

[Draft](#) Commission Regulation amending Annex I to Regulation (EC) No 396/2005 of the European Parliament and of the Council as regards radish leaves

[Draft](#) Annex

What is changing and why?

The maximum residue levels (MRLs) that apply to radish leaves today are those set for kale. The European Commission proposes to introduce the following distinction:

Large radish leaves: MRLs for **kale** apply.

Small radish leaves: MRLs for **Roman rocket/rucola** apply.

Actions

The MRLs for kales and Roman rocket/rucola are not always the same. Exporters of **small** radish leaves should check if their products are in compliance with the MRLs for Roman rocket/rucola. An overview of all EU MRLs can be found on the the [EU Pesticide Residues database](#).

Timeline

The new MRLs are expected to apply from approximately the fourth quarter of 2024.
