

Methods of sampling and analysis for perfluoroalkyl in food

Published by AGRINFO on 29 Nov 2022

EU sets detailed requirements for sampling and analysis for PFAS in foods

Commission Implementing Regulation (EU) [2022/1428](#) of 24 August 2022 laying down methods of sampling and analysis for the control of perfluoroalkyl substances in certain foodstuffs

Update

The EU is setting detailed requirements for methods of sampling and analysis for the control of perfluoroalkyl substances (PFAS) in certain foods.

Impacted products

fish, game, free range and outdoor poultry; outdoor fruit and vegetables; animal feed

What is changing?

The Commission recommends that Member States investigate the causes of PFAS contamination in foodstuffs with high concentrations of PFAS. Commission Recommendation (EU) [2022/1431](#) lists indicative levels beyond which to do so. The EU is setting detailed requirements for methods of sampling and analysis for the control of PFAS in certain foods.

Why?

To ensure that sampling of PFAS is reliable and consistent, the selected method of analysis needs to meet the specific performance criteria set out in Table 5 of Regulation [2022/1428](#).

Timeline

The Implementing Regulation was published on 24 August 2022.

Date of effect: 15 September 2022.

What are the major implications for exporting countries?

The presence of PFAS is likely to come under increasing EU scrutiny in the coming years. Sources of contamination can be wide-ranging. AGRINFO partners investigating the presence of PFAS in their food chain should take into account the sampling and testing recommendations set out by the Commission.

The validation of relevant analytical methods – in accordance with Article 34 of Regulation (EU) [2017/625](#) – is an important step in this process.

Recommended Actions

EU requirements for methods of sampling and analysis for control of PFAS will impact AGRINFO stakeholders who are building analytical capacity and gathering data on these substances to identify potential risks in the supply chain.

Background

Commission [Regulation \(EU\) 2023/915](#) sets out maximum levels for PFAS in certain foodstuffs. Commission Recommendation (EU) [2022/1431](#) lists indicative levels beyond which the causes of PFAS contamination in foodstuffs with high PFAS concentrations should be investigated.

Detailed requirements for the sampling methods used and laboratory analyses for PFASs are now specified in the Annex to Implementing Regulation [2022/1428](#) to ensure the reliability and consistency of official controls.
