

Metribuzin approval not renewed by EU

Published by AGRINFO on 09 Aug 2024

Regulation

[Draft](#) Commission Implementing Regulation concerning the non-renewal of the approval of the active substance metribuzin

What is changing and why?

The active substance metribuzin will no longer be approved in the EU because the European Food Safety Authority has identified several concerns, particularly endocrine-disrupting properties that may cause adverse effects in humans, and that pose a high risk to bees.

EU decisions not to renew or withdraw approvals for pesticide active substances primarily impact EU producers. However, following the non-renewal or withdrawal of approvals for pesticide active substances, the EU starts the process of lowering or removing the MRLs. In the case of metribuzin, MRLs are already set for most products at the LOD. However, MRLs are currently still in place for cassava, land cresses, and olives for oil production, and these are likely to be lowered. In most circumstances this will mean that metribuzin can no longer be used on these crops for export to the EU. Exporting countries should start to look for alternative solutions to metribuzin or consider a request for EU import tolerances.

Actions

Authorities in countries that are members of the World Trade Organization can provide feedback on the EU's proposal ([G/TBT/N/EU/1076](#)) by emailing the [EU TBT Enquiry Point](#) until **10 September 2024**.

Suppliers of cassava, land cresses, and olives currently using metribuzin should review current agricultural practices and start to seek alternative solutions in anticipation of changes to EU MRLs.

Timeline

Expected date of entry into force: fourth quarter of 2024.

Existing EU Member State authorisations of products containing metribuzin will need to be withdrawn within 6 months of the Regulation's entry into force. EU producers will be permitted to

use stocks of products for up to 12 months after the Regulation enters into force (approximately end 2025). A revision of metribuzin MRLs is expected for 2026.
