

## Novel food: phytosterols/phytostanols

*Published by AGRINFO on 06 Aug 2025*

Regulation [2025/1509](#) as regards the specifications of the novel food phytosterols/phytostanols

### What is changing and why?

In 2018, the European Union (EU) authorised as a novel food phytosterols/phytostanols made from plants, including sunflower, with the maximum level of other sterols/stanols set below 3.0%. The EU has now approved a request by an Argentinian company – Advanced Organic Materials SA – to update the specifications for this novel food. These changes allow the use of phytosterols/phytostanols with a content of "other sterols/stanols" of between 3.0% and 7.0%.

Only the company Advanced Organic Materials SA is authorised to sell phytosterols/phytostanols with a higher content of sterols/stanols on the EU market over the next 5 years, unless the company permits it, or if another company obtains a novel food authorisation for this product without reference to scientific data protected by Advanced Organic Materials SA.

This change does not affect the European Food Safety Authority's assessment of the safety of this novel food.

### Timeline

The revised specifications apply from **17 August 2025**.
