

# Official controls of contaminants in foods

Published by AGRINFO on 06 Mar 2023

EU publishes Regulations to standardise official controls of contaminants in food of animal origin and composite products

Delegated Regulation [2022/931](#) supplementing Regulation 2017/625 by laying down rules for the performance of official controls as regards contaminants in food

Implementing Regulation [2022/932](#) on uniform practical arrangements for the performance of official controls as regards contaminants in food

## Update

The EU has adopted two new Regulations on uniform controls of contaminants in food of animal origin and composite products, which include minimum control frequencies and a risk-based approach. Countries exporting to the EU must put in place an equivalent risk-based control plan to be approved by the European Commission.

## Impacted products

meat, offal, fish, crustaceans, dairy, eggs, honey, insects

## What is changing?

Regulations [2022/931](#) and [2022/932](#) replace Directive 96/23/EC to provide specific rules for official controls of contaminants in animal products and composite products. Competent authorities must submit a risk-based control plan to the Commission that demonstrates how they comply with EU legislation for contaminants in food.

In addition to contaminants, control plans cover residues of pharmacologically active substances, and residues of pesticides (Regulation [2021/1355](#)).

Controls of commodities from exporting countries to the EU take place at two levels:

- by exporting countries themselves
- by the Member State authorities at the border control post of the importing European country.

Exporting countries' control plans for foods of animal origin must provide guarantees of controls at least equivalent to those required from EU Member States (Regulation [2022/2292](#), Art. 12).

Control plans must include information on:

- the combinations of contaminants or contaminant groups and commodity groups to be controlled (2022/931, Annex I)
- the sampling strategy (when, where, what), including any history of non-compliance, especially cases reported under the Rapid Alert System for Food and Feed (RASFF) (2022/931, Annex II)
- the actual control frequencies for food placed on the EU market, taking into account the minimum control frequencies (2022/932, Annexes I and II).

Exporting countries must justify the content of control plans with reference to risk analysis.

A control plan can cover the total national production, or only production eligible for export to the EU (for example, it could be limited to establishments that export to the EU market). For this second option, the plan must describe how EU-compliant production is segregated ([2022/2292](#), Annex I, Part II, A4).

The European Commission updated its [Guidelines on control plans](#) in February 2023.

Guidance and templates for controls by Member States at border control posts are available via the Commission's [Sampling and Analysis](#) webpage.

## Why?

Directive [96/23/EC](#), which included EU obligations to monitor contaminants, was repealed on 14 December 2022. These two new Regulations update and adapt the [Official Controls Regulation](#), ensuring continued controls of contaminants in food.

## Timeline

Date of publication: 17 June 2022.

Date of entry into application: 1 January 2023.

## What are the major implications for exporting countries?

### Listing

Exporting countries can only export food of animal origin to the EU if they are included in the European Commission's [Establishment Lists](#) as authorised to do so. The control of contaminants in food of animal origin, in compliance with Regulations 2022/931 and 2022/932, is a requirement in order to be included in the list. Exporting countries must submit their control plan and provide guarantees of compliance with contaminant maximum levels. The level of controls in the exporting country must be at least equivalent to that required from EU Member States for EU production.

### Fishery products

For countries exporting fish, the control plan also includes official controls on fishery products which are carried out on vessels calling at a port in a Member State.

### Submission of control plans

The control plan must be submitted by 31 March each year. For plans due by 31 March 2024, the updated templates must be used ([European Commission 2023](#), 4.4).

The Excel template is comprehensive, thus more complicated than before. For ease of use, exporting countries are advised to delete the sections that are not relevant to them. The template covers residues of pharmacologically active substances, pesticides and contaminants under different tabs. Tabs (a) to (e) provide additional information and guidance.

### Exempted products

Gelatine, collagen, and raw materials for their production, highly refined products of animal origin, insects, frogs, frogs' legs, snails, reptiles and reptile meat are excluded from the scope (2022/2292, Art. 5.2). No control plan is necessary for these products.

## Recommended Actions

Countries that export food of animal origin and composite products to the EU must ensure controls of contaminants, equivalent to those for EU Member States. This is a public health obligation required in order to be included in the list of countries authorised to export these products to the EU (Regulation 2022/2292, Art. 6.2 (see [Third country lists](#) and [Public health requirements](#))).

Control plans must be risk-based. Competent authorities must justify their sampling strategy according to the required minimum sampling frequency.

EU Member States will look for possible non-compliances when checking commodities at border control posts.

Competent authorities in exporting countries can send any questions on this topic to the European Commission by emailing [sante-tcresidueplans@ec.europa.eu](mailto:sante-tcresidueplans@ec.europa.eu). They can also ask the [European Union Delegation](#) in their country to organise training.

## Background

### Control plans

The Official Controls Regulation ([2017/625](#)) establishes rules for official controls of both production within the EU, and products exported to the EU.

Delegated Regulation (EU) [2022/2292](#) supplements this basic Regulation regarding specific public health requirements for food-producing animals and animal products exported to the EU, replacing Directive 96/23 (**see Table 1**).

### Maximum levels

Regulation (EU) [2023/915](#) setting the maximum levels of contaminants in food complements these Regulations. For certain specific products, maximum levels are set in other Regulations ([European Commission 2022](#), section 10).

The Commission's updated [Guidelines on control plans](#) (2023) explain all the requirements for animal products in one document.

## Table & Figures

Table 1 Legislation based on the Official Controls Regulation <sup>1</sup>			
New rules apply from 15 Dec 2022 (1 Jan 2023 for contaminants) <sup>2</sup>			
New legislation	Control plans/programmes for exporting countries <sup>3</sup> are required for:		
	Pharmacologically active substances and their residues	Pesticide residues	Contaminants in food
	Risk-based, surveillance and import control	Coordinated multi-annual control programme	Food of animal origin and other foods
Delegated Act <sup>4</sup>	2022/1644	2021/2244	2022/931
Implementing Act <sup>5</sup>	2022/1646	2021/1355	2022/932

1 Official Controls Regulation (EU) 2017/625 (Art. 19).  
 2 New rules replace Directive 96/23/CE.  
 3 Control plans/programmes based on Regulation 2022/2292.  
 4 Delegated Acts supplement or amend non-essential elements of the basic law, and are adopted after consulting expert groups.  
 5 Implementing Acts aim to ensure uniform conditions for implementation, and are adopted with the agreement of Member States (a qualified majority) through a procedure called "comitology".
