Pesticides not requiring maximum residue levels

Published by AGRINFO on 26 Nov 2025; Revised 14 Apr 2026

Commission Regulation (EU) 2026/752 as regards maximum residue levels for *Allium fistulosum*, processed; lysate of *Willaertia magna*; magnesium hydroxide E528; *Onobrychis viciifolia* (sainfoin) dried pellets and *Vitis vinifera* L. seed extract (grape seed extract) in or on certain products

Commission Regulation (EU) 2025/2473 as regards maximum residue levels for *Betabaculovirus phoperculellae*, elemental iron and rape seed oil in or on certain products

What is changing and why?

Certain pesticides do not require maximum residue levels (MRLs) because their use does not lead to residues that pose a risk to consumers. The European Union (EU) has added the following substances to the list of pesticides that do not require MRLs:

- Allium fistulosum, processed
- lysate of Willaertia magna
- magnesium hydroxide E528
- Onobrychis viciifolia (sainfoin) dried pellets
- Vitis vinifera seed extract (grape seed extract).

Previously, in December 2025, the EU added *Betabaculovirus phoperculellae* and elemental iron to Annex IV, and confirmed that rapeseed oil should remain on that list (Regulation 2025/2473).

Timeline

The Regulation applies from **21 April 2026**.
