

Pesticides not requiring maximum residue levels

Published by AGRINFO on 26 Nov 2025

<u>Draft</u> Commission Regulation amending Annex IV to Regulation (EC) No 396/2005 of the European Parliament and of the Council as regards maximum residue levels for *Allium fistulosum*, processed; lysate of *Willaertia magna*; magnesium hydroxide E528; *Onobrychis viciifolia* (sainfoin) dried pellets and *Vitis vinifera* L. seed extract (grape seed extract) in or on certain products

What is changing and why?

Certain pesticides do not require maximum residue levels (MRLs) as their use does not lead to residues that pose a risk to consumers. The European Commission proposes to add the following five substances to the list of pesticides not requiring MRLs:

- Allium fistulosum, processed
- lysate of Willaertia magna
- magnesium hydroxide E528
- Onobrychis viciifolia (sainfoin) dried pellets
- Vitis vinifera seed extract (grape seed extract).

Timeline

The Regulation is expected to be published in January 2026, and will apply 20 days after its publication.
