

Plant health interceptions (EUROPHYT) in June 2024

Published by AGRINFO on 24 Jul 2024

TRACES: [Number of occurrences of harmful organism\(s\) in commodities imported into the EU or Switzerland](#) (June 2024)

What is changing and why?

This report summarises plant health ([EUROPHYT](#)) interceptions of products entering the European Union from low- and middle-income countries that occurred in June 2024.

There were 98 EUROPHYT interceptions due to harmful organisms concerning 25 countries (see Table 1), and 308 interceptions due to other non-conformities concerning 35 partner countries (see Table 2).

Shipments are intercepted at EU border controls when products do not comply with the EU's phytosanitary requirements. EUROPHYT reports the presence of harmful organisms and other non-conformities found during inspections. Interceptions due to "other non-conformities" are usually caused by an inaccurate or missing phytosanitary certificate.

EUROPHYT interceptions can have significant impacts on importers, exporters, and producers. Those affected may face delayed shipments, additional costs of testing and inspection, and potential rejections or destruction of their products as well as reputational damage.

Actions

To avoid the risk of interceptions, producers and exporters must take proactive measures to ensure their products comply with EU phytosanitary requirements. This can include implementing effective pest management strategies, using certified seeds and planting material, and complying with regulations and standards.
