

Rejection of health claim on creatine and cognitive function

Published by AGRINFO on 09 Oct 2025

EU proposes to refuse health claim linking creatine and improved cognitive function

Draft Commission Regulation refusing to authorise a health claim made on foods, other than those referring to the reduction of disease risk and to children's development and health

Draft Annex

Update

The European Commission has informed the World Trade Organization (WTO) Technical Barriers to Trade (TBT) Committee that it intends to refuse a health claim submitted by Alzchem Trostberg GmbH that daily creatine supplementation can contribute to improved cognitive function ([G/TBT/N/EU/1163](#)).

Impacted products

Health foods, creatine supplements

What is changing?

The European Commission proposes to refuse a health claim submitted by Alzchem Trostberg GmbH that daily creatine supplementation can contribute to improved cognitive function.

Why?

The European Food Safety Authority ([EFSA 2024](#)) concluded that, based on the data presented, a cause-and-effect relationship cannot be established between creatine supplementation and an improvement in cognitive function. The health claim should not be included in the Union list of permitted health claims because it does not comply with the requirements of Regulation [1924/2006](#).

Timeline

The Regulation is expected to be adopted in approximately the second quarter of 2026.

Recommended Actions

Competent authorities of non-EU countries that are members of the WTO may comment on the EU proposal by emailing the [EU TBT Enquiry Point](mailto:G/TBT/N/EU/1163) until **30 November 2025** (G/TBT/N/EU/1163).

Background

Regulation [1924/2006](#) establishes that health claims made on foods have to be authorised by the European Commission and included in the Union list of permitted health claims (Regulation [432/2012](#)). For a health claim to be authorised, EFSA must deliver an opinion on the claim concerned, which the Commission considers when making a decision.
