

Revision of plant pest temporary prohibition lists

Published by AGRINFO on 22 Jul 2024

Regulation

Regulation (EU) [2024/1957](#) amending Implementing Regulation (EU) 2022/1941 as regards the prohibition of introduction, movement, holding, multiplication or release of certain pests

What is changing and why?

The EU has updated its list of prohibited pests in the territory (Regulation [2022/1941](#)) based on recent plant health risk assessments.

Oriental tea tortrix (*Homona magnanima*) has been identified as a new pest that potentially meets the criteria for classification as a Union quarantine pest, and temporary measures have been introduced to manage the risk.

Eggplant fruit and shoot borer (*Leucinodes orbonalis*) has been re-evaluated and removed from the list as its risk to the EU was found to be low.

The Annex to Regulation 2022/1941 has been updated accordingly.

Timeline

Date of effect: **7 August 2024**.
