

Temporary increased official controls on foods from certain countries – January 2026 update

Published by AGRINFO on 15 Jan 2026; Revised 29 Jan 2026

EU increases official controls on certain foods from specific non-EU countries (January 2026)

Commission Implementing Regulation (EU) [2026/194](#) of 28 January 2026 amending Implementing Regulation (EU) 2019/1793 on the temporary increase of official controls and emergency measures governing the entry into the Union of certain goods from certain third countries implementing Regulations (EU) 2017/625 and (EC) No 178/2002 of the European Parliament and of the Council

Update

When a potential risk to public health is identified, the European Union (EU) can temporarily increase official controls on certain food products from specific countries. The latest of these Regulations increases controls for products from some countries, and reduces controls for others where the risk has reduced.

The countries for which official controls have **increased** on certain products are: **Bangladesh, Côte d'Ivoire, Egypt, Rwanda, Thailand, and Türkiye**.

The countries for which official controls have **decreased** on certain products are: **Brazil, Côte d'Ivoire, Egypt, India, Lebanon, Malaysia, and Türkiye**.

An updated list of *all* products for which there are increased official controls is provided in the Annexes to the Regulation.

For further information on the implementation and impact of these measures, see the AGRINFO guide [Temporary increase of official controls of food imports – Regulation 2019/1793: An introduction](#).

Impacted products

Beans, black pepper, cloves, food additives, grapefruits, lemons, mandarins, nutmeg, okra, oranges, palm oil, peppers, peppers (capsicum), pistachios, rice, sesamum seeds, strawberries, turnips, vanilla

What is changing?

Regulation [2019/1793](#) lays down the list of food and feed of non-animal origin subject to a temporary increase of official controls, and the rules for these controls.

This list is updated regularly according to the risk of contamination by mycotoxins (including aflatoxins), pesticide residues, pentachlorophenol and dioxins, microbiological contamination, Sudan dyes, Rhodamine B, and plant toxins.

The details of the temporary increases are given in:

- Annex I of the Regulation, which lists products from certain non-EU countries that are subject to a temporary increase of official controls at EU border control posts and control points, and the frequency of controls
- Annex II, which lists products and their countries of origin that are subject to special conditions as well to a temporary increase of official controls on entering the EU, and the frequency of controls.

The listing in the Annexes is very specific: each item refers to a particular product (e.g. groundnut) for an identified hazard (e.g. mycotoxins) from a named country.

Being listed in Annex I or Annex II has significant implications for suppliers. Annex II listing requires laboratory analysis and checks by competent authorities in exporting countries for **each consignment** of the affected commodities (see below).

Changes to temporary increases in official controls (Annex I)

This latest update of Regulation 2019/1793 makes the following changes to the list of consignments of food and feed subject to a temporary increase of official controls at EU border control posts (see Table 1 for details).

The following has been **added** to the list in Annex I:

- strawberries from Egypt for pesticide residues.

The following, already listed in Annex I, have **increased frequency** of identity and physical checks:

- seem beans and helmet beans (*Lablab purpureus*) from Bangladesh for pesticide residues
- palm oil as a packed product for direct human consumption (not in bulk) from Côte d'Ivoire for Sudan dyes
- peppers of the genus *Capsicum* (other than sweet) from Rwanda for pesticide residues
- peppers of the genus *Capsicum* (other than sweet) from Thailand for pesticide residues
- *Sesamum* seeds from Türkiye for Salmonella.

The following, already listed in Annex I, have **decreased frequency** of identity and physical checks:

- oranges from Egypt for pesticide residues
- lemons (Citrus limon, C. limonum) from Türkiye for pesticide residues.

The following have been **moved** from Annex II to Annex I (see “What are the major implications for exporting countries?”):

- peppers of genus Piper, or dried, crushed, or ground fruit of the genus Capsicum or of the genus Pimenta from India for ethylene oxide
- calcium carbonate from India for ethylene oxide.

The following have been **removed** from Annex I and are therefore no longer subject to increased controls in relation to the specific contaminant mentioned:

- palm oil in bulk from Côte d'Ivoire for Sudan dyes
- rice from India for aflatoxins and Ochratoxin A (it remains listed for pesticide residues)
- okra from India for ethylene oxide (it remains listed for pesticide residues)
- nutmeg (Myristica fragrans) from India for aflatoxins
- vanilla and cloves (whole fruit, cloves, and stems) from India for ethylene oxide
- turnips (Brassica rapa ssp. rapa) from Lebanon for Rhodamine B
- mixtures of food additives containing locust bean gum from Malaysia for ethylene oxide
- grapefruits from Türkiye for pesticide residues
- mixtures of food additives containing locust bean gum from Türkiye for ethylene oxide.

Changes to special conditions and temporary increases in official controls (Annex II)

This new update of Regulation 2019/1793 makes the following changes under Annex II (see Table 2 for details).

The following products have **increased frequency** of identity checks (visual inspection to ensure documentation corresponds with the products) and physical checks (checks on the product including sampling and laboratory testing):

- pistachios, mixtures and products produced from pistachios from Türkiye for aflatoxins
- pistachios, mixtures and products produced from pistachios originating from the USA and dispatched to the EU from Türkiye for aflatoxins.

The following products have **decreased frequency** of identity checks and physical checks:

- black pepper (*Piper nigrum*) from Brazil for Salmonella
- mandarins (including tangerines and satsumas), clementines, Wilking mandarins, and similar citrus hybrids from Türkiye for pesticide residues
- oranges from Türkiye for pesticide residues.

For specific information on the products concerned (e.g. relevant customs codes, details of hazards that need to be analysed), and a complete list of all products/ product origins subject to increased frequency of controls, please consult the draft Annexes of Regulation [2024/3153](#).

Why?

The EU assesses the potential risks, and the associated need for additional controls, based on information from various sources. These include: data from EU Member State authorities and exporting countries; European Commission audits carried out in exporting countries; and notifications reported to the Rapid Alert System for Food and Feed ([RASFF](#)) and the Trade Control and Expert System ([TRACES](#)). This information is normally reviewed every 6 months.

For commodities that are already listed, the Commission decides on a case-by-case basis, in consultation with EU Member States, whether risks have changed as a result of action taken by exporting countries, and if the increased controls or the special conditions can be relaxed or removed entirely. Further information on this decision-making process is provided in the [Commission Notice](#) on information related to risks and non-compliance.

Timeline

This Regulation applies from **18 February 2026**.

What are the major implications for exporting countries?

Temporary increases of official controls place significant additional demands on private sector operators and competent authorities in exporting countries.

Exporters of the following products newly added to Annex I should urgently review current practices and adopt additional measures to ensure compliance:

- strawberries from Egypt for pesticide residues.

Implications of being put in Annex I

Increased controls create greater uncertainty in supply because of delays and possible rejections of consignments. This may weaken the reputation and competitive position of suppliers from a listed country. It also may have cost implications when operators must cover all or part of the cost of increased controls (e.g. storage, inspection, analysis, or destruction of consignments in an EU Member State).

Operators and competent authorities in countries supplying products listed in Annex I (additional controls) must ensure that they put in place the necessary measures to prevent any new non-compliances and thus avoid a further increase in controls, or listing in Annex II.

What does it mean to be put in Annex II instead of Annex I?

Annex II listing is triggered when there is evidence of a serious risk to human health, leading to stricter entry conditions for affected food and feed products exported to the EU.

For consignments of Annex II-listed food and feed, the following actions must be taken before export, in the country of origin (or in the country from which the product is dispatched).

- Each consignment must be accompanied by the results of sampling and laboratory analyses conducted by the competent authorities in the country of origin, or the country where it is dispatched from, if different.
- Laboratory analyses must be performed by laboratories that are accredited with the ISO/IEC 17025 Standard.
- Each consignment must have an identification code, and each individual bag or packaging in the consignment must be identified with that code.
- Each consignment must be accompanied by an official certificate issued by the competent authority of the exporting country, or the non-EU country where it is dispatched from, if different. This certificate must be based on a specific model and must state the identification code; must be issued before the consignment leaves the control of the competent authority; and must be valid for not more than 4 months from the date of issue, and no longer than 6 months from the date of the results of laboratory analyses.
- Suppliers of products listed in Annex II may face practical problems and high costs when they try to access appropriate testing facilities, particularly if there is no in-country accredited laboratory. Competent authorities have to put in place all the necessary procedures before listed consignments can be exported. They may also face technical and administrative constraints that make it difficult to respond to requests for mandatory certification. In practice, the listing of products in Annex II can lead to a temporary stop in exports from the countries concerned.
- Suppliers must ensure rigorous routine analysis of contaminants and pesticides to avoid listing in either of these Annexes.

Recommended Actions

Exporters of all products listed in Annexes I and II of Regulation [2024/3153](#) must take steps to ensure full compliance with EU rules.

- Exporters of strawberries from Egypt for risks related to pesticide residues (newly added to Annex I) should urgently review current practices and adopt additional measures to ensure compliance.

Table & Figures

Table 1 Changes to Annex I of Regulation 2019/1793				
Country	Commodity	Hazard	Annex I status	Frequency of identity and physical checks
Bangladesh	Seem beans and helmet beans (<i>Lablab purpureus</i>)	Pesticide residues		Increased from 20% to 30%
Côte d'Ivoire	Palm oil for packed products for direct human consumption	Sudan dyes		Increased from 20% to 30%
	Palm oil in bulk	Sudan dyes	Removed from Annex I and no longer subject to increased controls	None
Egypt	Strawberries	Pesticide residues	Added	20%
	Oranges	Pesticide residues		Decreased from 20% to 10%
India	Peppers of the genus <i>Piper</i> , or dried, crushed, or ground <i>Capsicum</i> or <i>Pimenta</i>	Ethylene oxide	Moved from Annex II	20%
	Calcium carbonate	Ethylene oxide	Moved from Annex II	30%
	Rice	Aflatoxins and Ochratoxin A	Removed from Annex I and no longer subject to increased controls (but remains listed for pesticide residues)	None
	Okra	Ethylene oxide	Removed from Annex I and no longer subject to increased controls (but remains listed for pesticide residues)	None
	Nutmeg (<i>Myristica fragrans</i>)	Aflatoxins	Removed from Annex I and no longer subject to increased controls	None
	Vanilla	Ethylene oxide		None
	Cloves (whole fruit, cloves, and stems)	Ethylene oxide		None
Lebanon	Turnips (<i>Brassica rapa</i> ssp. <i>rapa</i>)	Rhodamine B	Removed from Annex I and no longer subject to increased controls	None
Malaysia	Mixtures of food additives containing locust bean gum	Ethylene oxide		None
Rwanda	<i>Capsicum</i> peppers (other than sweet)	Pesticide residues		Increased from 30% to 50%
Thailand	<i>Capsicum</i> peppers (other than sweet)	Pesticide residues		Increased from 30% to 50%
Türkiye	Sesamum seeds	<i>Salmonella</i>		Increased from 20% to 30%
	Lemons (<i>Citrus limon</i> , <i>C. limonum</i>)	Pesticide residues		Decreased from 30% to 20%
	Grapefruits	Pesticide residues	Removed from Annex I and no longer subject to increased controls	None
	Mixtures of food additives containing locust bean gum	Ethylene oxide		None

Table 2 Changes to Annex II of Regulation 2019/1793			
Country	Commodity	Hazard	Frequency of identity and physical checks
Brazil	Black pepper (<i>Piper nigrum</i>)	<i>Salmonella</i>	Decreased from 50% to 30%
Türkiye	Pistachios, mixtures and products produced from pistachios	Aflatoxins	Increased from 30% to 50%
	Pistachios, mixtures and products produced from pistachios originating from USA and dispatched to EU from Türkiye	Aflatoxins	Increased from 30% to 50%
	Mandarins, clementines, Wilking mandarins, similar citrus hybrids	Pesticide residues	Decreased from 20% to 10%
	Oranges	Pesticide residues	Decreased from 30% to 20%
